

How Does Nutronix Revolution Stack up Against the Competition?

**Everyone Who Starts a Company Believes That Their
Plan is New and Unique and Therefore the Best.**

**We Wanted to Use Numbers to Justify Our Own Belief
That Nutronix Revolution Will Be a History Setter
and that We Will be Counted Among the Leaders
in the Referral Marketing industry.**

This paper provides numbers to let you know that the compensation idea with the Nutronix Revolution “coded infinity weekly fast start legs feeder program” significantly beats all compensation ideas that we have compared it with. See www.nutronixrevolution.com for a drawing and overview of our plan. Listen to 712-432-8556 and 8557 for more detail.

Nutronix significantly beats: “pay on the weak side binaries”; Binaries with matching bonuses; Matching bonus programs and 5 level Match on Match; 1x2 cyclers; 1x2 residual cyclers; 1x2 cyclers feeding unilevels; 2x2 cyclers; 2x3 follow me matrices; 1x2 one time and 1x2 monthly pay cyclers; splitting board - feed from the bottom 2x structures; unilevel and unilevel with matches and multiple matches; fast start bonus programs; matching fast start bonus program; and all other 2x 3x 4x and 5x matrices and follow me matrices – especially those with no infinity feature.

We can effectively work within any of the Nutronix Coded Bonus legs and build substantial fast start weekly pay to infinity. These very large income amounts renew annually in the coded structure. These “first 2 of first 2” structures grow vertically naturally because of the 12 features that cause each person to want to get 2. These features do not all exist in other compensation plan that we have seen.

As you read this analyses document remember that when you get a Heavy Hitter under you, you can take it to the bank. This is because we do not have to fill levels to get paid and we do not have to balance like in a binary. When the Heavy Hitter makes \$30,000 per month, you have a very good chance of making almost \$30,000 per month and with greater assurance \$10,000 to \$15,000 per month and all you have to do is sponsor 2. Try to beat that. So just get lucky with a Heavy Hitter coming under you or go out and find one yourself. This can be virtually a 100% match.

All of the Heavy Hitters people are under you and you can get paid on all of them at the same time that the Heavy Hitter does.

A Heavy Hitter under you, in many other programs, dose you very little compared to the Nutronix 2x15 monthly pay matrix and the \$30 to infinity coded legs and the fully compressible 9 level deep unilevel program with infinity pay.

These are 13 Features of the Nutronix Revolution Plan that causes people to want to get 2 or more under any coded leg and thereby actually fill a \$131,000 per month 2x15 monthly pay matrix:

1. The products are in high demand and most people want to show our DVDs to their relatives and friends and others.
2. To earn monthly residual income up to \$131,000 per month a person must sponsor 2. These and all personally sponsored people are placed in the 2x15 monthly pay matrix. If people take all month to sponsor 2 in this 2x15 monthly pay matrix, it is filled in 15 months and delivers \$131,000 per month.
3. The cost to be in Nutronix Revolution with all our benefits is very low - \$39.95 per month. This allows a potential income of \$131,000 per month. (About \$60 if you want a physical product delivered to your home).
4. Many people never have their credit card drafted in month 2 because their income exceeds \$39.95. This makes this a onetime \$39.95 program.
5. Entry Level people can be in very good profit with very few people sponsored. When Entry level people are in profit quickly they are encouraged and don't quit.
6. As 2 tell 2 and take all month to do it under any of your coded legs, over \$1.8 million in weekly pay fast start \$30 checks are earned in 15 months and this is paid again annually as each person stays in Nutronix for 13 months.
7. All of these coded bonus people are forced to fit into the 2x15 monthly pay matrix.
- 8. *Most people, in any of your coded legs, want to have their own weekly pay coded leg under their 3rd person so they bring in 2 to do get to their 3rd person. This causes the first 2 of the first 2 in each coded leg to grow vertically as each person brings in 2 to get to their 3rd.**
9. Levels do not have to fill solid in the Nutronix 2x structures under coded legs to get the very high \$10,000, \$30,000 , \$100,000 and more pay outs.
10. As a matter of fact, many people sponsor 6, 10, 50 or more to have many \$30 "first 2 of first 2" weekly pay coded legs started. This causes massive spill over in the monthly pay 2x15 matrix.
11. As a matter of fact, with many people starting so many personal coded legs the "personal sponsorship" unilevel of each person becomes very large. A personal sponsor unilevel of 6 who get 6 9 levels deep is over 10 million people. When people in this unilevel purchase

additional products from the 70 item catalog this can generate massive amounts of income in this “personal sponsorship” unilevel.

12. In the monthly pay 2x15 matrix you are given a new 2x15 matrix (called reentry Profit Centers) that overlaps your original 2x15. You get a Profit Center each time your 2 personal sponsored people each sponsor 2 or you personally sponsor 6. (these feed the “personal sponsored” unilevel as well) . People want many of these Profit centers just like they want many coded bonus legs. This causes great spill over potential and your upline, in some cases, becomes your downline. Each new 2x15 Profit Center is worth potentially \$131,000 per month. The program is designed to allow over \$1 million per month incomes.
13. The numbers of people in the “personal sponsored” structure trigger 9 levels of infinity bonuses in the 2x15 monthly pay matrix. This feature provides very large incomes for the very many people who will be beyond the 15th level.

Part I is a mathematical analyses of a 2x2 cyler versus the coded bonus concept to infinity. Part II is an analyses of “build from the bottom” Splitting board systems. Part III is an analyses of a 2x3 follow me matrix program.

Part I - 2x2 cyler:

In our coded bonus to infinity structure we can show an example of an imbedded coded 2x2 cyler structure that yields \$180 with zero dollar input. The imbedded cyler idea in our coded bonus system can grow unassisted by the thousands. We pay only \$40 to kick off the cyler idea in Nutronix with the first one yielding \$180. That is a 4.5 return. Most cyclers only return 2.6. For example \$777 with a \$299 buy in. Our 2x2 cyclers pay and come from infinity depth.

Most 2x2 cyclers are only effective a few levels deep and die out very fast and require solid level fills for the follow me aspect to complete. (unless personally sponsored new blood is continually brought in.)

In one example of a popular program you pay \$299 and get \$777 on the first cycle and a free 2x2. In our 2x2 imbedded cyler you get one X \$180 (\$30 x 6 people) or \$180 with \$40 one time in. If we put \$299 into our coded bonus system would get $6 \times \$224 = \1344 .

When the first people in the 2x2 cyler follow you in the example company , you get \$777. We would get 4 times \$180 or \$720 with our imbedded cyler example. If we but in the equal example of \$224 in we would get $4 \times \$1344 = \5376 .

When the 2nd group follows you into a 3rd 2x2 system in our example company your get another \$777. In a 3rd system in nutronix coded bonus system we would get $16 \times \$180$ or \$2880. If we but in the equal example of \$224 in we would get $16 \times \$1344 = \$21,504$.

With the 4th follow me structure in the example company you would get another \$777. In a 4th system in our coded bonus legs we would get 64 times \$180 or \$11,520. If we but in the equal example of \$224 in we would get $64 \times \$1344 = \$86,016$.

One last example, when the 5th follow me structure in our example company fills we get \$777. In a 5th structure in our imbed 2x2 cycle we would get $256 \times \$180$ or \$46,080. If we but in the equal example of \$224 in we would get $256 \times \$1344 = \$344,064$.

One last point in the 2x2 follow me cyler example company, you don't move to the next until the last required line in the building 2x structure is filled solid. In the 5th structure of our example company

there are 1024 people solid on the 10th level. In our imbed 2x2 cyler nothing needs to fill solid to make our \$180 or fractions thereof. We get \$30 paid to us on every individual. It just so happens that our 2x2 structure adds up to \$180.

On a 10 level deep 2x10 there would be 2048 total \$30 checks or \$61,440. In this whole solid build 2x10 structure in a 2x2 cyler of our example company we would get 5 x \$777 or \$3885. Much less than \$61,440. But if we put in \$299 and paid 75% we get \$224 per person or 2048 x \$224 = \$458,752.

Which do you think is the better plan?

The same type of analyses would apply to a Splitting board structure with its payout of \$10,000 on the 2nd board. We would have \$30 times everyone in the downline with no breakaways or pass ups. This is a lot more income than the splitting board process and its \$10,000 pay out.

With our imbed 2x2 cyler thinking, we have unlimited prospecting at any depth in our coded bonus structure. We work in the warm marked of anyone at any depth and when 2 get 2 we get \$180. This is \$30 checks at a time paid weekly and renewing annually. As this organization grows we get multiple \$30 checks and \$180 total effect checks on any 2x2 structure to infinity depth.

We never run out of prospects to work with. As we do this, the monthly residuals in our 2x15 to infinity "placed spill" system fills for a possible \$131,000 per month residual for each free 2x15 overlapping matrix that we earn.

Part - II: Splitting board comparison.

When 8 come in to your line it splits and you should have brought in 2. (2)

When 8 more come in, your 2 got 2 you move up. (4)

When 8 more come in, your 2 got 2 and they got 2 (8)

When 8 more come in, your 2 got 2 and they got 2 and they got 2 (16) (32 total). The board splits and you get \$250 and a voucher and put on next board. This is based on a \$275 buy in.

[in coded legs we get \$30 times 32 or \$960 on a \$40 buy in. But if we had a buy in of \$275 we would have gotten about 75% or \$206 times 32 or \$6592. Compare \$6592 to \$500 in the splitting board system.]

When 8 come on the 2nd board who have 32 and move up. (64 under you)

When 8 more come in on 2nd board who have 32 you move up (128 under you)

When 8 more come in on 2nd board who have 32 you move up (256 under you) (512 total) you get \$10,000 and a voucher.

[in the code legs of nutronix we get \$30 times 512 minus 32 (= 480) or \$30 x 480 = \$14,400 on a \$40 buy in. With a \$206 buy in we would have gotten \$206 x 480 = \$98,880. About ten times larger than \$10,000.]

Which do you think is the better plan?

We have no passups or loss of heavy hitters. We can get our 2 at any time to qualify for the \$131,000 per month in our monthly residual 2x15. Our monthly draft come out of our commissions. Our system is total residual from the first person on.

Part III - Comparison with a popular 2x3 \$325 program with a small matching bonus.

A base 2x3 matrix is filled with a payout of \$500 voucher. Plus the opening of a follow me structure.

The people on all levels of the 1st 2x3 must each complete their own 2x3 to follow you to complete the 2x3 follow me structure. This requires the people on the 3rd level to be complete solid down to the 6th level which is 64 people or 128 people in the completed 2x6. Nutronix pays \$30 for each 128 on a \$40 price point in the coded legs. If we paid \$200 times 128 for comparison we would pay \$25,600 not \$8000 as they pay.

The 64 people on level 6 each fill their 2x3 bringing you down to a solid 2x9 matrix to get the next cycle in the 2nd matrix. Of course to have a solid 2x9 with 1024 total people there would be about 5000 people below the 9th level. This is because matrixes never build solid. This is why Nutronix has a 9 step infinity bonus to pay below the 15th level. With 1024 people in a Nutronix coded bonus system with a \$325 price point we would pay \$200. $\$200 \times 1024$ people is \$204,800. On a \$40 price point we pay $\$30 \times 1024 = \$30,270$ not the about \$10,000 that they pay. They may never pay it because the 2x9 must be filled solid.

As they fill level 10 and 11 they pay some additional matching bonuses for a total pay on a solid 2x11 matrix of \$33,800. A 2x11 solid has 4096 people. On our \$40 price point we pay $\$30 \times 4096 = \$122,880$. If we paid \$200 in our coded system we would pay $\$200 \times 4096 = \$819,200$. But remember that by the time a 2x11 is solid there would be at least 10,000 people in the 2 to infinity structure and we would pay $\$30 \times 10,000 = \$300,000$. We pay in the next week and we renew this \$300,000 annually. In addition all of these people are in our 2x15 monthly pay matrix which is worth as much as \$131,000 per month.

All of these people are also in our 70 product 9 level deep unilevel with full compression and 5% to 10% infinity bonus.
